- Up to 150 buttons may be placed on one screen

**Proven Solutions.
Profitable Results.**

Fast Bar Screen

Focus POS excels in the Bar & Nightclub scene. Focus minimizes the number of touches to ring in an order and start a tab which increases productivity and improves customer service. With the Focus Fast Bar Screen, the end result is a happy guest and increased profits.

Ease of Use

Bartenders can start a tab by simply swiping a credit card or entering the customer's name. Accessing open tabs is easy when using the Tab List Screen. Up to 64 tabs can be displayed on one screen and are sorted alphabetically to help find them quickly.

Paying out tabs with the integrated credit card system means bartenders spend less time at the computer and more time preparing drinks. All payment buttons are located on the Fast Bar Screen to minimize touches and speed up transaction times. A Change Due Screen is displayed with a large font so customers can see how much change to expect.

For those hard to remember or infrequent drink orders, bartenders can simply look up the pre-defined recipe of a cocktail or shot with a touch of a button. Recipes can also be sent to the printer for selected items to make sure they are being made correctly.

Focus POS Features

- Integrated Time & Attendance allows the point of sale to calculate payroll and provide labor cost reporting.
- Countdown Items allow staff to see the availability of an item before going out of stock.
- Real Time Sales to pagers sends sales, labor cost, and labor percentage information directly to pagers or mobile devices (no longer need to call in to check sales).
- Labor Scheduling is used to control and manage labor costs through the use of projected sales and schedule enforcement.
- Out of Stock Management allows suggestion of similar items for out of stock menu items.
- Automatic Menu Changes for lunch, happy hour or special events.
- Inventory management and reporting helps control food costs.
- Training Videos allow ongoing and continuous training of staff.
- Customer Loyalty option increases customer satisfaction and loyalty.
- House Accounts can be set up to charge and invoice special customers.
- Nutritional Information can be displayed on the screen for any menu item.
- Full Automatic Redundancy backs up the data to another computer for disaster recovery.

These guys have helped me out since 1994!

-Hugo Serna, Owner, El Palenque Restaurants

- Offline Credit can be used when the phone line or Internet connection for credit card processing does not work.
- Selling and redeeming gift cards is a quick and easy process.
- Enterprise Reporting consolidates multiple locations to a central location for reporting ease.
- Internet Credit Approval accepts credit card transactions in 2-3 seconds.
- Automatic Price Changes for happy hour, lunch or other pre-defined times.
- Scanned Menus allow ordering of menu items just as if you were looking at the menu.
- Table Management is a graphical tool used to view the status of the restaurant floor.
- Delivery is used to assign drivers and recall previous customer orders.
- Split Seat Theft Prevention is used to help prevent scams.
- Sales Contests are displayed on any terminal and updated in real-time to help promote sales.
- E-mail Reports at any given time or interval throughout the day.
- Packaged Items & Commands allow users to perform multiple actions with one touch of a button.
- Age Verification uses government issued ID cards such as drivers licenses to determine if the customer is eligible to purchase a menu item.
